

CUPAGIS equipment in University Oran1

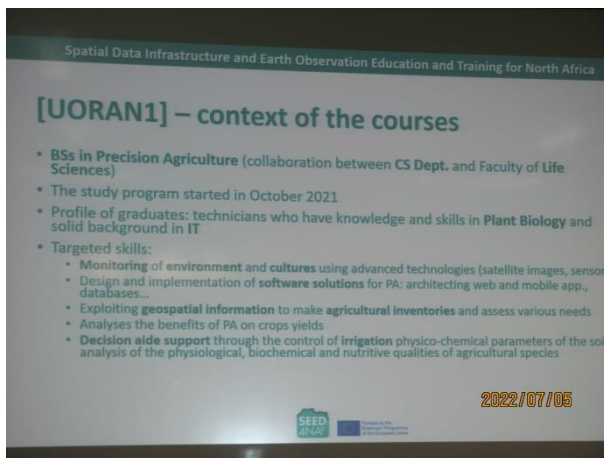

The computer and sensor equipment in Oran1 was demonstrated by students.

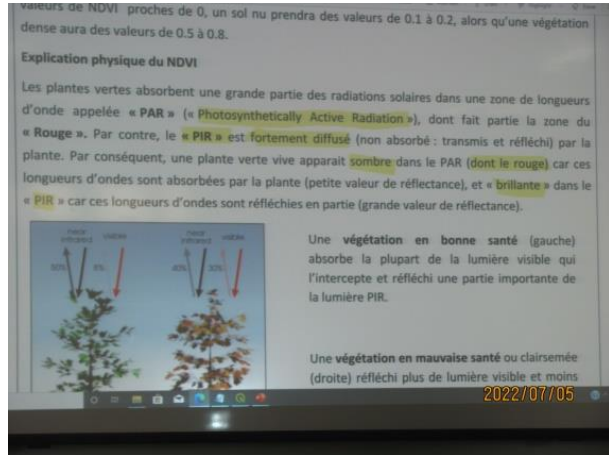

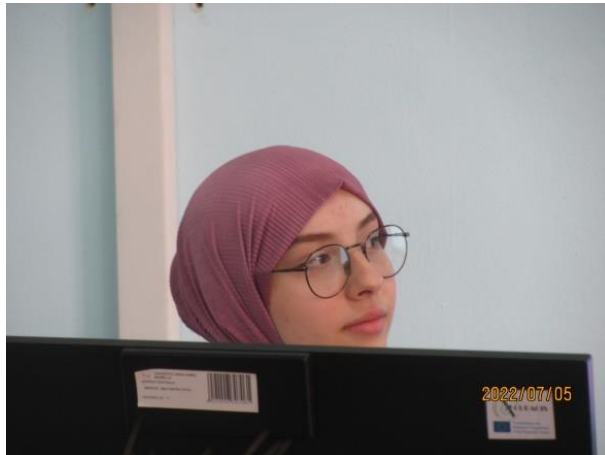

Comfortable workplaces where computers are covered by plastic against dust when not in use.

An overview by the teacher

Professor Yahia Lebbah explained the main points of the new curricula

An almost spontaneous (but evidently well prepared) mini-conference by students of precision agriculture

Demonstration / teaching of the use of sensor equipment for teaching. Clearly very complicated and challenging exercise that needs two professors to work together.

Much easier: GreenSeeker to measure how plants are growing.

One professor is enough.

Tired but happy: after mini-conference and study session

Cover again the computers. They are much needed in autumn when classes start again.

These girls will then be on the 2nd study year; much more experienced than the fresh students.
